

Resolution of the taxonomic status of Chilean and Californian jack mackerels using mitochondrial DNA sequence

E. Poulin, L. Cárdenas, C. E. Hernández, I. Kornfield, F. P. Ojeda

Abstract

Phylogeographic reconstructions using mitochondrial DNA sequences from both the control region and the cytochrome b gene demonstrated that two disjunct populations be recognized as *Trachurus murphyi* and *Trachurus symmetricus*. The species have been isolated for at least 250.000 years.
