

Access to quinazolines from 2-nitrobenzaldehyde and arylamines

Valderrama, J. A., Pessoa Mahana, H., Sarras, G., & Tapia, R. (1999). Access to quinazolines from 2-nitrobenzaldehyde and arylamines. *Heterocycles*, Volume 51, Issue 9, 2018, Pages 2193-2201. <10.3987/COM-99-8606> Accessed 25 Jul 2021.

Abstract

A synthesis of N-(2-nitrobenzyl) acetanilide (5) and (11) from 2-nitrobenzaldehyde and aromatic amines is reported. The reaction of amides (5) and (11) with iron in acetic acid-ethanol-water provided the corresponding 3-phenyl-1,2,3,4-tetrahydroquinazolines (7) and (12). Reductive cyclization of 1-acetyl-2-(2-nitrophenyl)-benzimidazol (16) to benzimidazo[1,2-c]quinazoline (19) and benzimidazol (20) is described.
