

Geographical Ecology of South American Desert Small Mammals: Consequences of Observations at Local and Regional Scales

Kelt, Douglas A. ; Marquet, Pablo A. ; Brown, James H.

Abstract

Five major drylands in South America display very low levels of faunal similarity. The remarkable consistency of faunal structure, however, suggests that it may be possible to extend earlier conclusions based only on the mammal fauna of the Altiplano and the Atacama Desert to all of South America's arid lands.
